

# What We Back Up For Confluence (Beta)

Rewind Backups for Confluence is a no-code, automated daily backup solution which provides comprehensive coverage for your data on Confluence. Rewind continuously monitors customers' feedback and Atlassian APIs and improves the backup coverage as needed.

## Get automatic daily backups & unlimited cloud storage

Automate your daily backups and initiate an extra backup as many times as you need. Get calendar access to all of your backups through the Rewind Vault. All of the backups are stored on Rewind's secure and redundant cloud without any additional cost to you.

## Restore your account in a few clicks

You can restore your account in a few clicks and recover from any disaster with Rewind. Rewind makes data recovery easy. All you need to do is to log in to your Rewind account, choose a date when everything worked, and click restore. No submitting tickets, wasting dev hours, or lost productivity—simply restore your Confluence data and get back to business.

## Something Missing?

If there's an item type you would like us to back up that we currently don't back up, please let us know! We're continually working to increase the functionality and security of Rewind Backups for Confluence, and we'd love to hear your thoughts at [sales@rewind.com](mailto:sales@rewind.com).

## Interested in Backups for Confluence?
